Hauser Lake Road to N. Bruss Road

Design Alternatives

ITD considered three alternatives to improve the highway. These were evaluated based on safety, traffic needs and environmental impacts.

1. No Build - Keep the current condition of ID-53

Based on the increased traffic volumes and crash data for this section of ID-53, ITD determined that improvements are needed and the project should move forward.

2. Widen ID-53 equally to the north and south

This alternative was not feasible due to the location of the railroad tracks and plans by BNSF to add more tracks in the future.

Preferred Design

3. Widened ID-53 to the north

The most feasible alternative allows for a continuous three-lane highway, with two travel lanes and a center turn lane.

Preferred Design

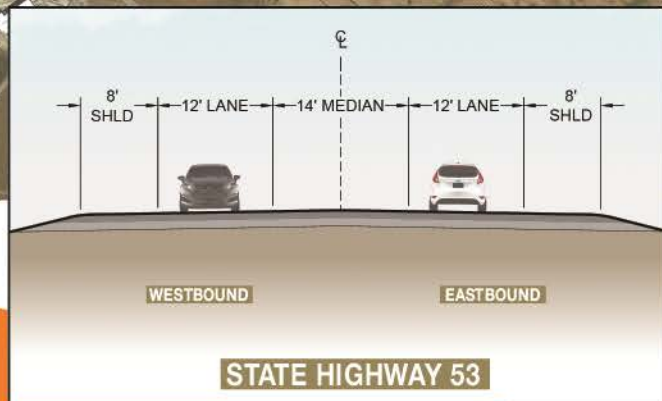

3. Widened ID-53 to the north

Highway shoulders will be widened on each side, and a continuous center turn lane will be added. Dedicated left turn lanes will be included at the following intersections: Hauser Lake Road*, McGuire Road, North Church Road and North Bruss Road. Right turn lanes and illumination will also be added.

*Hauser Lake Road will be rerouted with the construction of the Pleasant View Interchange to safely access ID-53, but in the meantime the department will construct safety improvements that will be consistent with the rest of the corridor. Given the shifting timelines of ID-53 projects and funding opportunities, this intersection is still in early design.

Thank You & Next Steps

Thank you for participating in this online meeting. Your input is important to ITD and the success of this project.

Next steps:

- Due to COVID-19, ITD property owner meetings will be rescheduled late spring or summer.
- Your comments will help ITD develop final design plans.
- ITD will continue to communicate with and involve the community in the project, both through final design and into construction.
